Cournand & Company, Inc.; Colonel Ned Feldman, USAFR, Robbins Mills, Inc.; Colonel Norman D. Frank, USAF (ret.); Mr. Charles Froesch, Eastern Air Lines; Dr. John H. Furbay, Trans World Airlines; Mr. Vincent W. Gillen, Reeves Instrument Corporation; Mr. Alfred J. M. Hamon, Shell Oil Company, Inc.; Mr. O. P. Hebert, Safair Flying Service Inc.; Mr. Owen O. Hunsaker, United Air Lines; Mr. Thorwald Johnson, Civil Aeronautics Administration; Mr. S. Paul Johnston, Institute of Aeronautical Sciences; Commander Richard G. Kopff, USNR, Arma Corporation; Colonel Harley W. Lake, Socony Vacuum Oil Company; Brigadier General James W. McCauley, USAF, 26th Air Division (Defense); Mr. Richard F. McCormack, Sperry Gyroscope Company; Mr. John J. McNulty, Control Instrument Company, Inc.; Mr. Edward W. McVitty, Consulting Engineer; Mr. Victor E. Moore, Trans World Airlines, Inc.; Mr. Leslie E. Neville, Department of Defense; Colonel Carl Norcross, USAFR, The Magazine of Building; Mr. L. P. Wenk, representing— Mr. Mundy I. Peale, Republic Aviation Corporation; Vice Admiral C. E. Rosendahl, USN (ret.), National Air Transport Coordinating Commission; Captain Harry Sosnoski, USN, Special Devices Center; Colonel L. N. Tindal, USAF, N. Y. Procurement District, N. Y. Regional Office; Mr. A. T. Wilder, Gruman Aircraft Corporation; Mr. Arthur Williams, Pacific Airmotive Corporation; Mr. Robert H. Wood, Aviation Week; Captain Walter E. Zimmerman, Charles S. Wood & Company; Lieut. Col. Huntly, representing—Brig. Gen. James W. McCauley, USAF, Commanding—26th Air Division (Defense).

VICE ADMIRAL C. E. ROSENDAHL

Dedication

This issue of the Solo is dedicated to Vice Admiral C. E. Rosendahl, U.S.N. (Ret.), for his outstanding record of achievements in the field of aviation and for his personal efforts on behalf of S.A.T. as a member of the Aeronautic Educational Commission.

April 1923—Student Naval Aviator—Member of original crew of Shenandoah

Sept. 1925—Survivor, Shenandoah loss

Sept. 1926-29—Commanding officer, airship Los Angeles

1929-30—Commander of Rigid Airship Training and Experimental Squadron

1930-31—Bureau of Aeronautics, Navy Dept.

1931-32—Commanding officer, airship Akron

1934—Commanding officer, U. S. Naval Station, Lakehurst, N. J.

1953—Appointed executive director of the National Air Transport Coordinating Committee

Since his retirement from the Navy in 1946, Mr. Rosendahl has been an aeronautical consultant and vice-president of Flettner Aircraft Co.

Greetings – Class of '54

Go up, dear graduate! This is practical advice in this wonderful air age. In days gone by, Horace Greeley advised "go West, young man." That, then, was the direction of opportunity.

The area of our modern frontier of opportunity to achieve happiness and peace is certainly the sky.

I believe that you are competent to take your place in the aviation industry. Each of you is different and will travel different paths on your way to success. However, the sky is practically limitless and so are your opportunities. Go up, young man! Good luck and may the Lord bless you.

FRANK WOEHR, *Principal*

Frank Woehr

History of Exploratory

S. A. T.—a big thrill when we first heard about it, but that thrill sort of died when we first saw the building. It was hard to believe that the big building on 63rd Street was a high school.

Well, in order to personalize this story, I must have two characters which I will name Ed Jones and John Smith, who will come into this story later on. Now let me take you back about four years when I first came to this school.

My name is Ed Jones. Of course, you might not know me too well but this is how I came to this school. The first time I saw the building I thought that it was some old factory and passed it up. Then, realizing that the building I had passed was the school I was to apply myself to, I walked back slowly and sort of took my time, taking things for better or for worse.

When I first entered the door of SAT, my friends and I cast our eyes on a pleasant smiling figure, which we found out to be Mr. Kaplan, one of the advisors. Another object caught our eyes, and it was also round and funny-looking. This object we found to be an aircraft engine specially designed for the school. After looking over the school, we all marched into the auditorium, spat out our bubble gum and took off our hats.

Entrance exams were next on the list; then came worrying if the test was passed or not. After leaving the room, we were told whether or not we had passed the test. I made it and was told to report back to school on a certain date. That date arrived and I was raring to go.

I arrived at the school early on the day I was told to, and went to my class. Three crafts were to be taught to us and the three crafts were sheet metal. auto-mechanics and woodworking. We were taught the uses of a quantity of tools (or should I say we were taught to use a variety of tools) such as hand drills and saws.

Math

the Senior Class

History

My first shop was the dirty one, grease monkey shop; intended to familiarize us all with the tools. We started to work on a car, but sometimes I had my doubts. The rest of the days were all right; like the first time at lunch when I had to get used to the heroes that were being sold around the corner. It was hard to eat one of them, being as small as I was, but I was helped along because the place was so crowded that my sandwich was always crushed. Woodwork time finally came around and everybody seemed to enjoy the shop except the guys who got splinters in their hands. After that we went further into the school system by learning how to bend a piece of metal, dented, out-of-square, and crooked. But thank heaven, did we get smart.

Eventually we were kicked out of first and second term shops but met up with woodwork once again in the third term shops. Coming prepared with gloves, we didn't have to worry about splinters. But this shop was a lot of fun watching and laughing at the guy who got his coveralls glued to the bench or nailed down. Leaving this term, we entered into the fourth term shops where we met the greater half of our class. Still being on the sharp side, we were a term ahead of them. Here I met John Smith. He was in my engine shop where we had many a laugh and scraped knuckles from safetying the nuts. This was the scene of many a mishap, none of which was too flattering to us. For instance, the time when John and I were in that shop one of the boys was told to clean out one of the cylinders, and not being too bright, he was stymied for a moment, only for a moment, because you could see that suddenly an idea struck him and ten minutes later he was found in the washroom cleaning out the cylinder with soap and water.

John and I left the engine shop knowing all (?) there was to know about engines. John and I were split up in the shops because he had to go back to

Engines

G. W. Jagger

History of

Hydraulics

the wing shop. But still and all we had lunch together and academic classes too.

The next shop I had to visit was the fifth term shops, where nobody knew what was in store for them. Of course, they gave us one of those dangerous shops, better known as "cable splicing." We accepted the job with open hands and were given some cable splicing tools. Leaving the shop wasn't so bad except for the bloodstained coveralls and the pinholes in our fingers.

At lunch time, John told me about what was doing in his shop. First they would get their shop talks and then do a day's work, finishing, that left the rest of the day for sailboat races. The drinking fountain was filled with water to give it the effect of an ocean. The boats were made from capstrips and gusset plates. He also told me how he had to take off his shoe and sock and tie a piece of string to his toe, the other end being on the capstrip which was in the steam box. It seemed that someone in his shop was lazy and kept swiping the finished capstrips.

I met up with John again in the sixth term. It was wonderful to go through four different shops all in the same term. The first one was electric wiring shop. We both thought that we were in for a shock but it turned out all right even though it was six long flights up. The track coach was always hanging around trying to pick up some husky fellows for his team. That shop must have been a test shop. It was pretty easy the way Mr. Robertson explained things.

But the next shop was a pip. That was the Bugle and Drum Corps shop. Yes, I mean Mr. Bloom's shop. For two straight weeks we sat on benches and were given welding notes. Sitting there so long gave me blisters on my derriere.

When we finally went to work, John almost had a heart attack the way Mr. Bloom brought in the acetylene cylinders, just the way he rolled and kicked the cylinders over to their places. Once he almost dropped one and

English

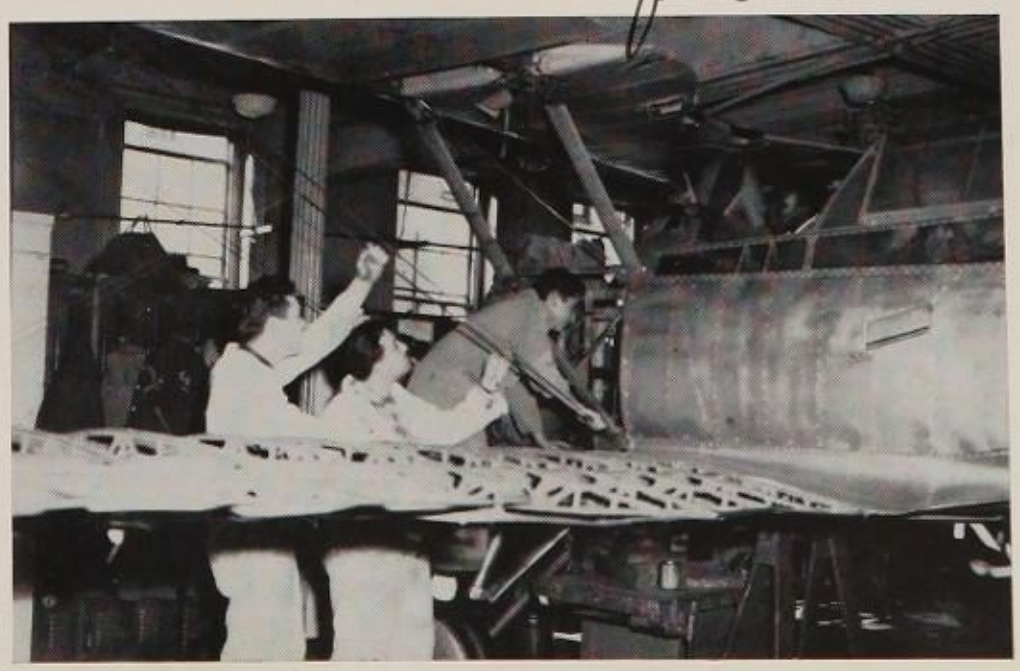
the Senior Class

Drawing

that was when John almost had a heart attack. From here we went to the tank shop. There we made gas tanks which were not supposed to leak (?). For some strange reason they did. Machine shop with Mr. Williams was quite an experience making some very handy tools that we could always use. Many a finger was lost and many a hanging was had. Why I remember the time when one of the smaller guys went for a ride around the overhanging belts. He's not with us any more. May he rest in peace.

Once again we were separated, John and I that is. I was now a Senior. John went back to cable splicing shop and I went to the eighth term shops. It seemed strange to me but he was always going backwards instead of frontwards. Here I was in Mr. Miller's airplane shop, all nice and cozy for the first third of the term. After shop talk we would dash to the airplanes and have our morning snack. I always ate in the Gulfhawk because you couldn't be seen from the floor, the seat was very low. Next came hydraulics. That was a tiresome job when you wanted to try out one of your connections, so we all chipped in and hired someone to do it for us (a rookie). Leaving this shop was such a sad parting because Mr. Bennett could never find anyone while we were in there, so he couldn't collect any senior dues from us. Next shop was riveting (sheet metal). There was nobody to bother us and it was quiet. Except for the sound of a few rivet guns all day long.

I was in the eighth term now and I was sent back to the engine shop where I was going backwards and my buddy John was going frontwards. Seventh term engine shop was very interesting. Engines were taken apart and put completely back together again. We worked with precision instruments and checked the old engines we had for sizes and wearing defects.



Maintenance

History of Science

Sometimes I wondered what year those engines were built in. They reminded me of Mr. Wolozin because the school was built around him.

When the first third came around I received my wings for keeping a certain average in my school work. The term was creeping up on us and finally the day came in January when I graduated. My diploma was in my hands and I was congratulated by Mr. Woehr and my friend John.

The day had come when I would be up on the stage and receive it and then I could say goodbye to old SAT and someday come back to see if there was a new school built for it.

Well, now that Ed has left me, I guess it's my turn to take up from where he left off. You see I have to graduate too. Being in the CAA course made it tough but I figured it would be best in the long run.

Here I was in the eighth term shop starting off in the Airplane Maintenance shop. The month of February was cold and hot; we just couldn't make out the weather. G.O. voting came around and then over to Julia Richman we marched for the G.O. Installation. It was pretty good this time because some of the girls from the Richman News came to sit in on it. Finally this month ended and we began to realize that we were getting closer to graduation.

March was an exciting month. The New York Daily News ran quite a number of articles about the schools on vandalism. Our school was mentioned and it caused some commotion throughout the student body. Every one sort of put the innocent look on their faces and they said that nothing was happening but where there is smoke, there is fire. A Senior Patrol was formed to see that every one went to their classes and it was working out all right. The G.O. dance was also held with Julia Richman and it turned out a success.

April was the big month for all the Seniors. It was the month of the

the Senior Class

awarding of wings to all the outstanding students. There was a big group of boys who strived for this goal. Julia Richman once again was in with the inter-school activities. They were invited to come to the ceremony. The marching contest was a big thing. Mr. Bloom livened it up with his Bugle and Drum Corps. Mable Dean Bacon was on the April schedule for a G.O. dance.

May! When a young man's fancy turned to Nancy, Jean and all the girls. Spring was on full blast now and everybody had the lazy feeling and with hookey in their eyes they would walk over to Central Park. The baseball team was doing okay and so were the rest of the clubs.

June was here at last with graduation practice and all exciting things were happening. The last month of the year, for the Seniors forever if they weren't going to further their education and yet the rookies still had the climb to strive for. I wonder what will become of all the rest of the gang; some may go into the service and others to work. I can still remember Bill and the way he used to clown around and always seemed to get into trouble. Also the other guys who told the jokes, soreheads, showoffs, all of them. Yes it was a long climb to the top but did we make the top yet. It's hard now when we're getting on the stage receiving our diplomas and saying goodbye to a great place that helped make men out of us. Taught us the way to get along with all kinds of people—the good and the bad. The way of understanding each other and looking forward to the future.

The future that awaits around the corner. The summer will be a long one that we all wanted, one that could now last for years and years. So good bye, old SAT. Good luck and thanks for everything.

By Roger Price, Robert Nadekow, Richard Costa, and Joseph Doughney

Do-All

We Look Skyward

MY PLANS FOR THE FUTURE
by Eduviges Rasquin

It has always been my ambition to become an officer in the Armed Forces. My plans are to take a test for the Air Cadets, and take up, if I pass, either a pilot or navigation program. I intend to serve about ten or fifteen years in the service and at the same time work toward a mechanical engineering degree.

I don't intend to get married at a young age because I feel that young people don't know what marriage really is. The age which I believe is best for getting married is about 25 years and over, because by that time I can realize what the world is about. I would like to raise a family somewhat in the way I was brought up, and to see that my kids get plenty of my attention so that each makes plans for going to college and becoming a useful citizen.

Those in general are my plans for the future. Oh, yes, I would also like to write a book or two.

MY PLANS FOR THE FUTURE
by Jerome Marcus

I am planning to attend school at the Academy of Aeronautics for a period of two years. At the end of two years I would like to obtain a license entitling me to repair aircraft engines.

After finishing school I am going to enlist in the United States Air Force and serve my country. I would like to obtain the rank of sergeant while in the Armed Forces. When I receive my discharge I would like very much to get married and settle down in California. I will try to work at one of the airfields as an engine mechanic. My biggest goal of all is to earn enough money so that I can support my family and help my mother and father.

For Our Future

TOO YOUNG TO BEGIN A FUTURE

by Richard Voehmler

Upon leaving this school, I will most likely either join one of the services or get a job in some place where there is no age requirement. One of my greatest hopes after graduation is to hold a job at a small airport, at least until I am 18, old enough to take the Air Force exam. To further my experience I am going to join the Air Force Reserve at Mitchell Field and would like to attend Flight Engineering School through the Reserves.

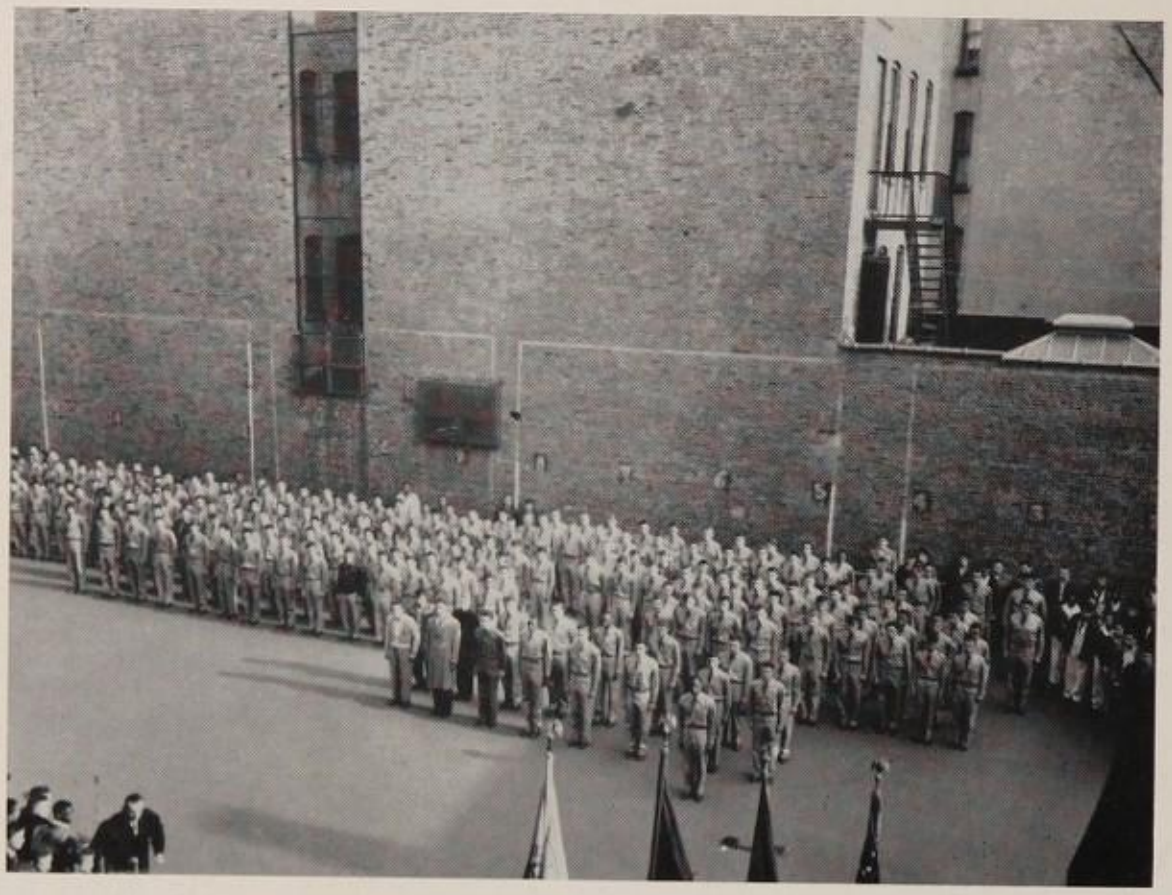
When I have my "A" license, I would once more like to return to a suburban airport, where I could work at the same time and gain valuable experience and practice for the CAA engine exam. At this time I don't feel I would make a career out of the service, but should I be drafted I would make the best of it and try to further my interests.

MY FUTURE

by Joseph Agostino

All my life I have always wanted to fly. I have never had any other ambition. When I was ready to enter high school, I made SAT my choice. After three years at SAT I knew I couldn't meet the requirements of an airline pilot. However, when I reached engine shop in my senior year I decided my future as an aviation engine mechanic. "If I can't fly them, I'll fix them."

But who knows? Maybe some day I'll make it and get up into that wild blue yonder.



Senior Pledge

"We, as graduates of the Manhattan High School of Aviation Trades, make this pledge to the City of New York, to the school which has trained us, and to the aviation industry.

"We will never bring disgrace to our city, our school, or our trade by neglect of our obligations, carelessness in our work, or inattention to our duty. We will abide by the rules of the Civil Aeronautics Administration of the United States of America. We will not permit these rules to be violated by others if it be within our power to prevent.

"While we continue to keep this pledge, may we constantly advance in our chosen work and in the respect of our fellow workers. If we fail in our obligations to the industry of which we are a part, may we no longer have a place therein. So help us, God!"

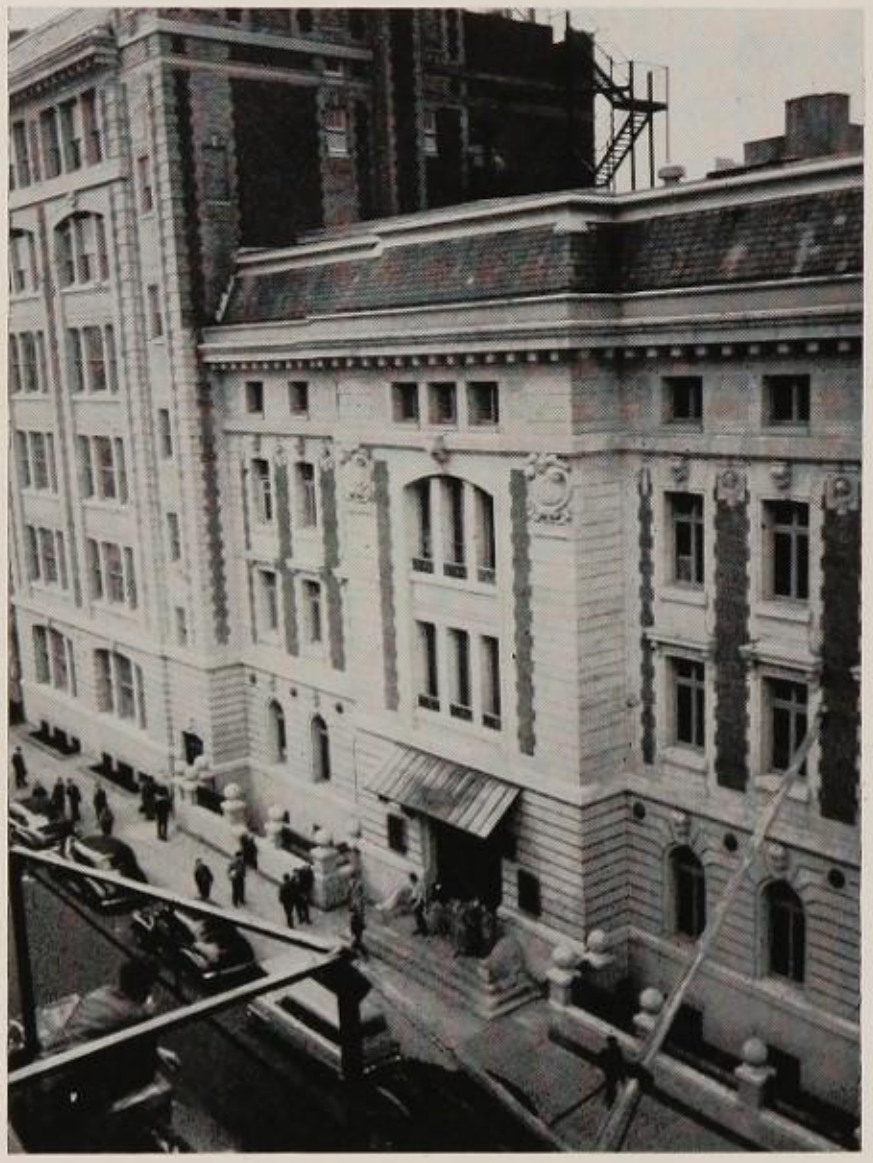
201 West 27th Street
Manhattan 1, New York
"Sabu"
Engineer in aviation
I shall return
2nd Term Class President; 4th Term Secretary; 5th Term Secretary; 8th Term Toolroom Foreman



Alma Mater

O Aeronauts, to thee we raise our praises,
O S.A.T. we all salute thee,
In all our work, the motto is, "Be ready,"
On earth, in sky, our efforts soar high,
O school of ours, we hope to prove your faith in us,
We shall keep strong, our faith shall not die.

Those halls where once we learned to do thy bidding
Are silent now, our steps have gone afar
Greater work to do, we bring a nobler spirit,
Man's brotherhood, our guiding star.
Steadfast in life, in death we'll bring thee glory
Oh school of ours, through all the years.

As once we came, so now we part, together,
Hand clasping hand, our hearts beat all as one;
One thought, one word, will brighten in our mem'ry,
It is to serve, we leave thee now;
Service to God, to man and to our country
Crown with success our highest aims.

Plans Being Drawn For $6,000,000 School

A Mechanic's Valedictory

The joys of our school days are passing away
As from old S.A.T. we depart,
And yet, as we leave the old ruin behind,
Fond memories gladden each heart.

Dear friend of those wonderful days in the shops,
If you've won your "A" license or not,
Let us toast all the lads that we met here at school,
May they ne'er be despised or forgot!

No job in the world's so exciting to us,
As aircraft and engine repair,
With a wrench on our knees, a-shooting the breeze,
While the hum of machines fills the air.

The screech of the drill and the stench of the dope,
And shavings all over the floor,
Then the sound so swell of the lunchroom bell
Starts a football rush for the door.

Then Ho! for the Hollywood, Slim Mary's too,
With Hamburger Specials galore,
Or Hero Sandwiches two feet long
At Fay's Second Avenue store!

I'll be seeing you soon in some factory or shop,
(Or perhaps I'll be pushing a plow)
And so Godspeed! Whatever we need
We will earn by the sweat of our brow!
